

Year 2 Knowledge Organiser—Living Things and their Habitats

An organism is another word for a living thing,

A habitat is a place where an organism lives. The right habitat must provide everything the organism needs to survive, if not the organism will not be able to live there and it will die.

These are some habitats

		
Polar Habitat	Forest Habitat	Desert Habitat
		
Ocean Habitat	Grassland Habitat	Urban Habitat

Living or non-living?

All **living** things breathe, eat, grow, move, reproduce and have senses. These are **life processes**.

All **non-living** things do not breathe eat, grow, move or reproduce. They do not have senses.

Alive/Living		Dead/Non-living		Never been alive/non-living	
					
Lion	Oak Tree	Fallen leaves	Bone	Phone	Light Bulb

Life Processes

Movement	Reproduction	Sensitivity	Nutrition	Excretion	Respiration	Growth
