Living Things and their Habitats.

The perfect habitat provides everything an organism needs to live healthily.

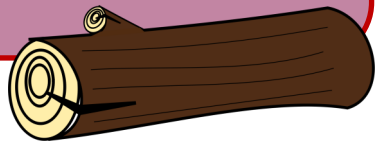
A habitat is the place where a plant or animal lives

An organism is another word for a living thing.

Some habitats are very large, like deserts or rainforests.

Living things breathe, eat, grow, move reproduce and have senses.

Some habitats are very small, like under a log. These are called microhabitats.



All organisms have a life cycle which includes birth, growth, reproduction and death.

Things that are non-living cannot do any of these.
